PROFESSIONAL SUMMARY-

Analytical Computer Science Engineering student with a focus on Full-Stack Development (MERN, Next.js) and Generative AI. Experienced in architecting RAG-based systems and Deep Learning classifiers while maintaining a strong foundation in Java, Data Structures, and Algorithms. Proven ability to bridge the gap between frontend performance and complex backend AI logic to solve real-world technical challenges.

TECHNICAL SKILLS-

Programming Languages: Java, Python, JavaScript, Bash Scripting, TypeScript

Frameworks & Libraries: React.js, Next.js, Node.js, Express.js, FastAPI

Mobile Development: React Native

Machine Learning & AI: PyTorch, TensorFlow, Keras, CNN, RNN, Attention Mechanisms

AI Tools & Concepts: LangChain, RAG, LLMs, ChromaDB

Tools: Git, GitHub, Command Line

PROJECTS-

AI vs Human Voice Classifier — *Python, Deep Learning, PyTorch*

- Developed a deep learning-based audio classification model using PyTorch to distinguish between human and AI-generated speech.
- Extracted audio features using Librosa and trained CNN/RNN architectures for classification.
- Achieved 84.7% accuracy.

RAG-Based Document Query System — *LangChain, Gemini API, ChromaDB, FastAPI*

- Built a Retrieval-Augmented Generation (RAG) system that answers user queries by extracting relevant information from documents and databases.
- Stored document embeddings in ChromaDB for fast vector similarity search.
- Designed a FastAPI backend to handle document upload, embedding, and querying.

PitHub - Github-like Version Control System— *Express.js, MongoDB, commander.js, React.js*

- Created a Node.js CLI tool to simulate commands like init, add, commit, and push.
- Stored repository metadata and commit history in MongoDB.
- Version Control Systems (currently building).

Kafka (Adaptive UI Personalization System) - *Reinforcement Learning, Bandit Algorithms*

- Built a React Native mobile application that dynamically adapts and simplifies the UI based on real-time user behavior.
 - Applied Reinforcement Learning and Bandit algorithms to model user interactions and optimize UI decisions using reward-based learn.
-

EDUCATION & CERTIFICATIONS

BE in Computer Science (Currently Pursuing)

St Joseph Engineering College (3rd year)

CGPA - 8.45

Pre-University Course (PUC)

Saraswati PU College | Aggregate: 86%

SSLC

BGS Central School | Aggregate: 86%

Hackathon Participation

Manipal Hackathon 2025

Developed "Kafka", an adaptive UI personalization system using React Native, Reinforcement Learning, and Multi-Armed Bandit algorithms.
